Efficient management of parts inventory

Mining and aggregates producers are constantly looking for ways to reduce operating costs. One effective way is to perform preventive maintenance and efficient inventory management.

By carrying out preventive maintenance, you get the most out of your machine and you can easily plan what parts are needed and when. This way, you don't have to keep parts in stock longer than necessary, resulting in inventory savings.

Best value for the money

Metso Outotec has developed parts kits to make your maintenance easier and more efficient, thereby ensuring your crusher's operating performance. With one order you get all the necessary parts, perfectly matched to your machine's preventive maintenance needs.

Our kits are designed according to the exact specifications of your machine, and thus are a perfect fit.

Single sourcing

When acquiring our OEM parts kits, you are sure to get exactly the parts you need, nothing more or less. And since all the parts are dispatched by the same sender in a single kit, there's only one item to keep track of.

Getting the most out of your crusher

Carrying out preventive maintenance and using OEM parts extends the life of your crusher and gives you a better return on investment the day you decide to sell it. Metso Outotec's long-lasting parts are designed according to original tolerances to ensure a perfect fit and safe operation.
